Everlux[®]

Photoluminescent safety signs

Photoluminescent safety signs suitable for installation at the high and intermediate location levels (page 8 to 69). The photoluminescent properties are in excess of those required by national and international Standards.

Self-adhesive signs

Photoluminescent self-adhesive safety signs suitable for installation at the high and intermediate location levels (page 70 to 77). The photoluminescent properties are in excess of those required by national and international Standards.

Everlux[®]-LLL

Photoluminescent low level signage - Low Location Lighting

Aluminium photoluminescent signs for tunnels

Photoluminescent safety signs suitable for road and rail tunnels (pages 96 to 103). The suitable for areas with reduced levels of light to a minimum level of 25 lux. The signs are supplied with an aluminium base material for high resistance to hostile conditions, temperature variances, maintenance and cleaning schedules including high pressure washing methods.

Reflecto-luminescent signs

Reflecto-luminescent safety signs (pages 104 to 115).

They provide the ideal signage solution for locations where both vehicles and people may circulate. They are also of benefit to maintenance, rescue and other personnel who may need to use torches to manoeuvre.

Kits and Accessories

Accessories and specialised products (photoluminescent and non photoluminescent) including photoluminescent kits, Handrail tape, Aluminium frames, Flexible Brackets, Magnetic, Four-sided signs, Fixing system for type 3 suspended signs and Adhesive (pages 116 to 125).

A safety sign communicates its message by using a combination of pictorial graphics, shapes and colours

Colour should be for everyone!

... and because colour is an essential component of a safety sign, $\circledast Everlux^{\ast}$ are proud to be associated with ColorAdd - the colour identification system for colourblind people.

ColorAdd is a project which was developed with the goal of allowing colourblind people to correctly identify each colour, thereby making communication more intuitive, effective and inclusive. ColorAdd is an extremely intuitive symbolic language that uses the primary colours in combination to create the full colour/ code palette.

DARK TONES

By adopting the ColorAdd system, the ③ **Everlux**°catalogue allows colourblind people to fully comprehend all the components of safety sign.

Severlux[®]

How to order

All **Severlux**^{*}, **Everlux**^{*}-LLL, **Everlux**^{*}-AL and **Everlux**^{*}-RL products have a unique 5 digit code. To order you need to indicate the following:

1 - The 5 digit product code which can be found directly below each sign image

- 2 The size (mm) please note relevant sign sizes applicable to each code
- 3 The type of sign (see page 12). If no sign type is specified then a Type 1 sign will be supplied by default.

Example:

This sign is available in the following sizes 300x100; 400x120; 400x150; 600x200 and 900x300 and also as a Type 1, 2 or 3 sign.

To order the sign shown above in 400mmx120mm and as Type 1 please use the following format:

 Code
 Size
 Type

 80 008 - 400x120 - Type 1

(mm) 300x100 400x120 400x150 600x200 900x300

Severlux[®] app

The **Ceverlux** app is the most effective to make your work easier when conducting a site survey or whenever you require photoluminescent safety signs.

With the **Severlux** app, the full range of **Everlux** photoluminescent safety signs is now accessible on your mobile or Tablet. The **Everlux** app also offers additional features such as technical information.

The **Severlux** app will assist an engineer or risk assessor whilst conducting a site survey and will prove to be an essential tool. Whether it is a full site survey utilising building plans or a less comprehensive "walk-round" survey the **Severlux** pwill allow the user to insert signs in the appropriate place, choose the appropriate size and make a complete survey whilst listing all the functions needed.

Ideally, the **Severlux**[°]app will prove to be an essential tool for all professionals who undertake risk assessments, safety signage & fire safety surveys, projects, maintenance and fire equipment installation or have direct responsibility for premises safety.

The **Severlux** app is available for iOS (4.3 or higher, for iPhone, iPod touch and compatible with iPad) and Android (version 4.0.0 or higher). This App can be downloaded from App marketplaces by searching for **Severlux**. Full details are also available on <u>www.everlux.eu</u>.

Everlux®

③ Photoluminescence Performance

Technical characteristics of photoluminescent safety signs

Time after	Luminance Intensity (mcd/m ²)		
removing the exciting light (in minutes)	BS ISO 16069 BS ISO 17 398 ^(*) DIN 67 510-4 ^(*)	𝔅 Everlux®	
10	140 mcd/m ²	215 mcd/m ²	

Measurement criteria in accordance with BS ISO 16069 and DIN 67510-1 $\,$

Indicates the measurement in millicandelas per square meter (mcd/m²) of sign's luminance intensity 10 minutes after removing the light source.

(*) Minimum luminance for class C

Time after	Luminance Intensity (mcd/m ²)			
removing the exciting light (in minutes)	BS ISO 16069 BS ISO 17 398 ^(*) DIN 67 510-4 ^(*)	𝔅 Everlux®		
60	20 mcd/m ²	30 mcd/m ²		
Massurement criteria in accordance with BS ISO 16069				

Measurement criteria in accordance with BS ISO 16069 and DIN 67510-1 $\,$

Luminance intensity 60 minutes after removing the light source. ^(*) Minimum luminance for class C

Period of light decay: This is the time (in minutes) during which the luminance intensity is higher than 0.3 mcd/m^2 - a value approximately 100 times greater than the limit of visibility.

Stimulated with 1000 lux, during 5 minutes, with a lamp with colour temperature of $6500\mathrm{K}$

Material: Photoluminescent rigid plastic 2 mm thick

Printing: Serigraphy, high quality gloss paint with UV resistance and a 5-year guarantee

Surface: Antistatic and easy to clean

Fire Reaction: Self-extinguishing (Previously Class M1) and flame retardant according to IEC 60092-101:2002 **Chemical Characteristics:** Non-radioactive, non-phosphorous, lead-free and non-toxic.

Sign performance and technical characteristics

Technical Guarantees

The photoluminescent characteristics and performance values are printed on all **Everlux**[®] signs as per ISO and DIN Standard requirements. This provides consumers with the appropriate information and the guarantee of a high quality product.

BS ISO 17398: 2004

Specifies the requirements of a performance-related classification system for safety signs. The performance criteria and testing methods are specified in this Standard to ensure that factors relating to photoluminescent, durability and expected service can be characterised and specified at the time of purchase.

Please see the following example:

This brings the signs into alignment with other safety equipment where the technical information is supplied on the apparatus, e.g. Fire extinguishers. This helps specifiers and consumers to make an informed decision about which signs should be used.

The quality of **Severlux**, **Severlux**-LLL and **Severlux**-AL safety signs is ensured

by a continuous quality control system and all **Everlux**^{*} photoluminescent products have the Lloyd's Register Type Approval Certificate.

The method of measuring the luminance performance as per ISO and DIN Standards is carried out in the laboratory where all the measuring equipment is calibrated by an accredited official body.

S Types of signs

Different types of application may require different alternatives for mounting signs

For signs to be seen clearly they must be mounted according to the appropriate viewing angle.

Type 1 (single-sided)

Parallel wall mounted sign.

Type 2 (double-sided)

- The full range of <a>S Everlux° signs are available as a Type 2

A Type 2 sign can be mounted perpendicularly to the wall by means of either a rigid aluminium or flexible plastic bracket. The flexible bracket consists of a plastic strip which enables the perpendicular installation of a double-sided Type 2 sign and was developed with the aim of allowing a sign to swing through a 180 radius without breaking if struck.

- The Type 2 "Fold"

The Type 2 "Fold" sign is an evolution of the standard aluminium and flexible bracket projecting sign options also available. Made from 2mm PVC with a 90° fold at the attachment end, these lightweight Type 2 projecting signs can usually be installed without the need for drilling and offer the ideal solution when ensuring the signs visibility in corridors and stairwells etc.

Type 3 (double-sided)

A Type 3 suspended single or double-sided sign is intended to be suspended from a ceiling. The sign is supplied with fixing holes drilled in the top corners to allow the appropriate suspension fixing to be attached (see page 122-123 for Type 3 suspension fittings).

Type P (panoramic signs)

A panoramic sign offers the greatest visibility and is printed on the two outward facing surfaces to offer a 180° viewing radius.

Sign size and viewing distances

The size of the sign is defined by the maximum viewing distance from which the sign is understandable. The table below shows the maximum viewing distance of each sign according to BS 5499-4:2013 for safe condition signs and BS ISO 3864-1:2011 (superceding BS 5499-1:2002) for other signs categories. The viewing distance at which a sign of a particular size is conspicuous and comprehensible depends on the illumination of the sign and the amount of detail it contains.

- D maximum viewing distance in metres (m)
- h overall height (printed area) of the signboard in millimetres (mm).
- Z distance factor taking into account the sign category, illumination factors and level of detail.

According to BS 5499-4:2013 – escape route signs have a distance factor value (Z) of 170 (considering a $100 \le$ vertical illuminance at sign <200 lux) whereas other sign types have an assumed distance factor value of 60 as defined by BS ISO 3864-1:2011.

Please note that the key dimension when ascertaining the viewing distance of a sign is it's height.

Siewing distances

For a sign to be visible and understood

The size of the sign is chosen according to the maximum viewing distance and the layout of the premises. However, the viewing distance at which a sign of a particular size is conspicuous and comprehensible depends on the sign category, illumination factors and level of detail.

Viewing distances (according to BS ISO 3864-1:2011) – Fire equipment and sign categories Viewing distances (according to BS 5499-4:2013) – Code of practice for escape route signing

Please note that the key dimension when ascertaining the viewing distance of a sign is it's height.

Viewing distances

Signs positioned at the high and intermediate location levels

Signs positioned at the High Location Level are intended for all users within a building. Therefore, they shall be installed at a height above 1.8m. This way the presence of people or objects located between the equipment and the user does not obstruct the visibility of the signs.

Signs located at the Intermediate Location Level are intended for the user of the identified equipment. This signage contains complementary information advising the correct usage of the equipment or what actions are required and should therefore be installed at a height of between 1.2 and 1.8m.

Example (fire extinguisher):

Person A is able to identify the fire extinguisher's whereabouts because the sign is positioned at the High Location Level. This is despite the fact that **person B** is obstructing the extinguisher's visibility. The size of a fire extinguisher location sign is dictated by the appropriate viewing distance required.

A supplementary ID sign is positioned above the fire extinguisher within to the Intermediate Location Level (eye level). This provides the intended operator of the fire extinguisher (**Person B**) with instructions advising safe use.

The presence of an ID sign does not substitute the need for a fire extinguisher location sign but is an additional sign that provides information regarding the type of fire extinguisher and the class of fires for which is safe to use

Selection of signs ${\mathfrak S}$

Selection of signs and installation height

The best photoluminescent properties are achieved when a sign is installed as close to a light source as possible and receiving direct light as a result. This will ensure that the sign remains visible in the absence of light.

Escape route signs

It is necessary to make sure that from any given point within a building people have clear directional guidance on how to reach the designated place of safety. These instructions are given by using standard escape route signs along the escape route.

The evacuation safety system is comprised of signs positioned above doors and along the escape routes indicating all changes of direction leading to the designated point of safety. It is essential that when reaching a sign people can already see the next one and continue that way until the final exit.

All escape route signs should generally be installed within the 1.8m - 2.5m height range.

Fire safety signs

These should be selected and installed in a way that guarantees their visibility from any point within a building. In the event of fire it is essential that fire-fighting equipment is readily available to be used as a first response. For this reason, such equipment needs to be identified quickly and easily.

Permanent signs must be used at all times and placed above the location of each piece of fire-fighting equipment and within the 1.8m to 2.5m height range (or even higher depending on the viewing distance or due to intermediate objects hindering visibility).

In situations where fire-fighting equipment and location signs are not clearly visible another sign may be required to indicate the location of the fire-fighting equipment. This ensures prompt and easy identification of this type of firefighting equipment.

Identification signs should also be placed directly above the fire-fighting equipment as this will also help to identify what type of extinguisher to use.

Prohibition, mandatory action and hazard signs

When identifying different areas of risk management, these signs must be positioned to clearly identify the nature and the location of any given hazard or action required. In all situations where certain actions or behaviour can be dangerous or cause risk, Prohibition signs must be used in order to reduce the risks associated with this type of behaviour.

Using the correct Hazard signs in the right locations will reduce the number of dangerous incidents and the risk of accidents. Special attention should be given to placing the signs in a clear and visible location before encountering the hazard. Signs also need to be as near as possible to the risk areas. For example: In an area where fork-lift trucks operate, signs should be placed on all of the doors leading into this area as well as positioning other complementary signs at a higher level.

To ensure the use of Personal Protective Equipment (PPE) or to indicate that a specific course of action is to be taken mandatory signs must be used.

Signs for industrial areas

The main rule for evacuation routes that should always be considered is: That from any given point within a building one must be able to clearly see the high location signs, i.e., evacuation, location, fire alarm call points, fire extinguishers, etc.

Therefore, in large buildings and/or those with a complex layout, an assessment has to be made regarding viewing distances and to take into consideration any temporary obstruction of the signs by looking at them from various angles, corners, access routes, etc.

In these cases larger signs should be mounted at a higher level or suspended from the ceiling.

Large directional signs specifically designed for warehouses and larger buildings -Available either as Type 1 or Type 3 signs

British Standard with text

80 263

European council directive 92/58/EEC

(mm) 1200x600 80 271 80 272 80 273 80 274

Vertical profile signs suitable for pillars, columns and narrow receiving surfaces

This range of signs offers alternative escape route signs suitable for difficult locations, such as car parks, supermarkets, structural steelwork, etc.

British Standard with text

European council directive 92/58/EEC

Standard rectangular Type 1 signs often do not suit installation onto pillars due to their shape and a reduced effective viewing distance due to their relative size. Evacuation signs specifically developed for pillars allow pictograms to be larger, therefore providing a greater viewing distance. The image shown illustrates the comparison between the two types of evacuation signs and the pictogram size.

Panoramic signs - signs which offer 180° visibility

Wall mounted

Type 2 "Fold" signs - Lightweight projecting signs

The Type 2 "Fold" sign is an evolution of the standard aluminium and flexible bracket projecting sign options also available. Made from 2mm PVC with a 90° fold at the attachment end, these lightweight Type 2 projecting signs can usually be installed without the need for drilling and offer the ideal solution when ensuring the signs visibility in corridors and stairwells etc. The type 2 "Fold" signs are supplied double-sided, unless otherwise requested.

Assembly Point signs

Assembly Point signs are essential. These signs provide information in order to direct an evacuee to the designated point of safety where individuals can be accounted for in an evacuation process. If someone is missing help can then be directed to find those individuals.

(mm) 150x150 200x200 300x300 400x400

AED Location Signs	80 655	80 656	

An automated external defibrillator (AED) is a life-saving machine positioned in public areas that gives the heart an electric shock in incidents of cardiac arrest. Over 30,000 cardiac arrests a year occur in the UK and the use of an AED has been proven to increase the chance of a sufferer surviving a cardiac arrest by up to 74%.

At present there are over 6,000 AED machines positioned in public areas and this is set to increase significantly over the next few years with the UK Government working actively with organizations such as the British Heart Foundation, the UK Resuscitation Council and the Football Association to ensure that AED machines are commonly placed and readily available.

425x150

When escape route signage is considered a common problem is often encountered. Many buildings are fitted with safety signs throughout but the Final Exits are illuminated by a fixed electrical light which often displays an EEC Directive sign image, often in the form of a self-adhesive decal. As one of the few universally accepted truths within safety signage is that it should be of a continuous type, this can often create a dilemma. To overcome this common issue, [®] Everlux[°] has developed a range of photoluminescent self-adhesive, transparent escape route decals for luminaires and bulkhead light fittings.

Manufactured on self-adhesive vinyl with photoluminescent BS EN ISO 7010 pictograms, the [®] Everlux[°] photoluminescent decals will guarantee visibility in all situations as the sign's message will be visible in all circumstances.

The decals are available in a range of sizes to suit most luminaires and bulkhead light fittings. They can be easily cut to the appropriate size, thereby resolving this perennial problem with a simple engineered solution!

Marking strips

Photoluminescent marking strips to identify hazardous areas

Recommended for areas where people circulate especially to indicate, machinery, pillars, corners, low-level fixed or protruding objects, dangerous areas, etc

81 801 81 802

81 805 81 806

S Everlux[®] safety bumpers for flat surfaces and for edges

In all premises there are obstacles that can create a danger to the movement of people. Also pillars, tubes and other objects protruding from walls, pavements or ceilings can cause damage to users when they occur along the evacuation routes. The & Everlux° safety bumpers allow the softening of the impact in a way to minimise the effects of a collision.

As they are photoluminescent they not only minimise the consequences of the impact but also help to prevent it as they remain visible in any circumstances, even in the absence of light.

Technical Characteristics of 🗷 Everlux® Bumpers

- Material: cellular neoprene
- Resistance to fire: self-extinguishing (ex-class M1)
- Coated with photoluminescent material

Various bumpers can be installed side by side to offer a wider area of protection. Each bumper is supplied with a high adherence adhesive tape to allow it to be quickly and efficiently adhered to most common surfaces that are clean and free from dust.

For angles other than 90°, flat bumpers should be used.

Each bumper is supplied with two high adherence adhesive tapes (one for each internal surface) so as to allow it to be quickly and efficiently adhered to most common surfaces that are clean and free from dust.

This bumper can be applied together with the bumpers

for flat surfaces (ref. 88 561) to increase the protection

Fire extinguisher and fire hose reel signs

Fire extinguisher and fire hose reel signs

Fire extinguisher instruction for use signs

Identification ID signs for fire extinguishers, fire hose reels and fire blankets

③ Everlux* fire extinguisher, fire hose reel and fire blanket identification signs are intended to complement the non-automatic fire-fighting equipment location signs required by law and fully conform with BS EN 3-7:2004 + A1:2007. They allow the user to quickly identify what type the fire extinguisher is and what type of fire it is safe or unsafe to use on.

75x200

0

(mm)

ID signs ensure full compliance, in all situations, with the standard BS 7863 and with the newly amended Standards BS 5306 8:2012 which states that "It is highly recommended that an Identification Sign (ID sign) is fixed/installed immediately above the fire extinguisher".

Numbered fire extinguisher identification signs

(mm) 150x120

Numbering fire fighting equipment is an effective and thorough way of identifying the location of such equipment. It also helps H&S Responsible Persons and enforcing authorities to identify and report accurately if an extinguisher is damaged, missing or used. This ID sign is in a landscape format with a space below the fire extinguisher pictogram in the bottom left hand corner. This space allows for up to 3 numbers to be added. The numbers are printed in black on self-adhesive transparent vinyl. The same number/s should correspond with the fire extinguisher and the ID sign in order to ensure the fire extinguisher remains in its original location and can not be confused with another one.

It is the installer's responsibility to ensure that the appropriate ID sign is selected with any installed Fire Extinguisher type.

Numbered fire extinguisher identification signs

These numbers are available in the sheets below in two different formats: one format contains the same digit and the other contains multiple digits. The sheets in single digit format are available with numbers 1 to 0. There are 90 numbers supplied on each sheet. The multiple digit sheet contains the most commonly used numbers in greater quantities and should allow the identification of up to 24 fire extinguishers.

Know your fire extinguisher information signs

Everyone in the workplace should receive appropriate training to know when it is safe to use a fire extinguisher in the event of a fire. The "Know your fire extinguishers" sign will help with personnel training and will offer a continuous reminder of what type of fire extinguisher is to be used in each type of fire.

Personalised fire equipment missing signs

(mm) 75x200

This useful sign indicates when fire equipment has been removed from its prescribed position whilst also promoting your company in a discrete and aesthetic style. These 200x73mm signs are installed behind the relevant fire extinguisher or fire blanket and remain hidden until the equipment is removed. Once removed the sign will indicate that the equipment is missing whilst also communicating the company responsible for its specification and/or maintenance. Available in quantities of 250, 500 & 1000 the signs can be personalised to feature your company logo and/or contact details in two colours of your specification.

(1) Personalised Fire Equipment Signs are quoted net and with carriage included. Please contact your Sales Manager for details

(2) If company logo is to feature - a hi-resolution file copy (Jpg, Png or similar) will be required to ensure high reproductive quality

Do not use lift signs

Escape Plans 📰

Escape Plans In accordance with BS ISO 23601:2009

The BS ISO 23601:2009 standard establishes design principles for displayed Escape Plans that contain information relevant to fire safety, escape, evacuation and rescue of the facility's occupants. These plans may also be used by intervention forces in case of emergency and are intended to be displayed as signs in public areas and workplaces. The Escape Plans must shall be designed in accordance with the evacuation strategy of the facility (and address the specific needs of the occupants of the premises or part thereof.)

Escape Plans for hotels, schools, shopping centres, hospitals...

Escape Plans are a fundamental complement to safety signs. They illustrate the escape route and building layout and help to educate users of a building in the correct actions to adopt in an emergency situation. Escape Plans shall be located so that they are conspicuous in their environment of use and sited to ensure that they are accessible and readable to the intended user. Escape Plans shall be permanently fixed and are intended to be located:

a) At positions where occupants can learn the means of escape andb) At strategic points of the escape route:

- On every floor at primary entry points to the building;
- Halls and corridors;
- Near lifts and stairs;
- In every room, e.g. hotel rooms;
- At appropriate congregation points, e.g. cafeterias, office centres, meeting rooms, etc
- At principal junctions and intersections.

To comply with current legislation, employers should plan for emergencies, and give appropriate training to their staff, providing a full range of escape plans. I Everlux[®] Escape Plans are oriented to ensure perfect guidance in an emergency situation. They are designed to offer clear instruction by using symbols for escape routes, location of fire and alarm equipment, and safety instructions.

📰 Escape Plans

Evacuation plans for hotels, schools, shopping centres, hospitals...

Where emergency lighting is not provided in case of failure of the normal lighting or where a photoluminescent safety way guidance system according to BS ISO 16069 is provided, Escape Plans comprising photoluminescent materials shall be used. In all cases, the photoluminescent materials shall be no less than classification C according to BS ISO 17398.

If directional instructions are to be given from a specific "You are here" point, such directional information shall be convoyed by the use of arrow (indicating the direction of movement of people) and the directional arrows shall be in safety green.

The escape routes shall be highlighted in light green to ensure a good and quick identification of the escape route to follow. In buildings that receive foreign public, the safety instructions and symbols will be presented in English and in a second language. If required, a third language may be considered, associating the symbol of the flag to each language.

Escape Plans for hotels and residential care homes (4 Languages)

Terres Everlux° Escape Plans in a 200x300mm format are appropriate for hotel rooms, guest house rooms, and care homes providing information of escape routes, location of fire equipment and safety instructions for guests and occupants.

Alarm Zone Plans

The newly amended BS 5839-1:2017 Fire detection and fire alarm systems for buildings – Part 1: Code of practice for design, installation, commissioning and maintenance of systems in non-domestic premises has made clear reference to the need for an alarm zone plan to be positioned in close proximity to the alarm system's control and indicating equipment (CIE). The Standard clearly states that the absence of an alarm zone plan should be considered to be a "major area of non-compliance" and that "in at least one multiple-fatality fire, it has been determined that some or all of the deaths could have been avoided if a diagrammatic representation of the premises (commonly described as a zone plan) had been provided in close proximity to the CIE."

Escape Plans

3D Escape & Alarm Zone Plans

Everlux Escape and Alarm Zone Plans are now available in 3D. Using state of the art software, we are able to render 2D drawings into 3D plans that show all salient details with even greater clarity. The 3D viewpoint allows the observer to orientate themselves and identify key information far more readily than traditional 2D plans.

$m \uparrow$ Signs for wind turbines

Signs for wind turbines

Wind power is a natural form of energy production that develops constantly, largely due to its renewable and inexhaustible nature. Unlike most other energy resources, wind power is a "clean" energy resource that does not require the combustion of pollutant waste or the destruction of natural resources.

In the UK, wind farms supply an increasingly significant contribution to the National Grid and this is reflected by the proliferation of wind turbines, both on land and around the coastline of the UK. A wind turbine is a large, technical, highly engineered structure which requires special safety considerations during all stages of its lifespan including manufacture, transportation, installation, operation and maintenance. Despite being remotely controlled, the isolated and remote location of many wind turbines often results in catastrophic destruction when an accident occurs, particularly fire.

However, the greatest likelihood of a fatal incident is during the installation and subsequent maintenance of a wind turbine. The requirement for High Access working means that, although exceptionally rare, falls can and do occur and are often fatal. This is further exacerbated by the lengthy time it takes emergency aid to reach the remote wind turbine locations.

Severlux® are acutely aware of the special safety requirements that apply to wind turbines and as such they have developed a range of signs that are specifically designed to meet the requirements of this unique industry. The range of signs is intended to convey Information, Warning, Prohibition and Mandatory messages that contribute to an increased awareness and understanding of the safety measures required, thereby reducing the risk of an accident.

This range of signs has also been specifically developed to ensure that they fully comply with all existing legislation standards and with the material specifications that apply to wind turbines.

----- Pipe content identification

BS 1710:2014 - Specification for identification of pipelines and services

Length 25m

Width 50mm "Identification of pipes conveying fluids in above ground installations and on board ships on a generic basis. It also includes ducts for ventilation and conduits used for carrying electrical services."

British Standard BS 1710 prescribes that any pipeline that conveys potentially dangerous liquids or substances within the workplace must be properly marked by using a colour coded identification system to accurately identify the contents of pipes, conduits, and ducts. The implementation of this Standard will help to reduce the

risk of possible confusion, injury, or any other potentially dangerous incidents.

However, BS 1710 also provides for the option of using user defined supplemental colours for 'other liquids' and specifies marking for ventilation ducts and electrical conduits. The Standard also specifies the pipe marking for medical gases and refrigerants.

Fluid	Col	Ref.	
Unidentified liquids	Black		84 971
Air	Blue		84 972
Combustible or non-combustible liquids	Brown		84 973
Water	Green		84 974
Combustible or non-combustible gases	Yellow ochre		84 975
Steam	Silver		84 976
Fire fighting	Red		84 977
Acids, alkalis	Violet		84 978
Electricity	Yellow		84 979
Flow arrows	-	<u> </u>	84 980

The BS 1710 pipe marking standard only applies to pipes carrying fluids that are located above ground and to generic pipes on ships. It requires that, at a minimum, pipe marking must be located on both sides of valves, service appliances, bulkheads, wall and floor penetrations, as well as any other place pipe contents identification is needed.

BS 1710 specifies two types of colour coding - Basic Identification Colours and Safety Colours. Decorative or protective coatings on pipes may not use any of these colours.

The system for marking pipelines and their contents which is comprised of single colour self-adhesive vinyl rolls of tape. The system requires a base colour to identify a general media group with additional colours to identify specific pipe content. This system is used in tandem with flow direction indicators to accurately mark the pipeline, its content and flow direction.

Everlux[®]-LLL

Normative and legal framework

The LLL sign system (Low Location Lighting) was originally regulated by Norms associated with areas of high risk such as Aviation - (FAA in 1984) and Maritime – (IMO in 1989). After 1999 with the development of new photoluminescent technologies, several other areas have adopted them and have initiated their Normative process. At present, the Standard BS ISO 16069 (SWGS - Safety Way Guidance System) defines the whole photoluminescent Safety Sign System at all levels.

	BS ISO 16069	SWGS - Safety Way Guidance Systems
vant Jards	NFPA	Code 101 (Signs and Evacuation Routes)
Relevar Standar	IMO Resolution A:752 (18) and ISO 15370	Ships and Marine Technology
	BS ISO 3864 and EN BS ISO 7010	Symbols and Colours in Safety signs

Installation

Severlux-LLL System for walls - Signs and strips

The strips and sign systems can be applied directly to the wall either by adhesion (**Severlux**[°] adhesive is recommended) or by being installed with a vandal proof aluminium rail screwed to the wall. The installation of the **Severlux**[°]LLL system should ideally be done in a continuous manner and on both sides whenever the corridor width exceeds 2m.

If the width of the corridor is less than 2m, it is recommended that the **Stverlux**²LLL system is installed on one wall/side only. If there is fire-fighting equipment positioned within the corridor the **Stverlux**²LLL system should be installed on the same wall/side that it is situated. However, in the absence of fire-fighting equipment, the **Stverlux**²LLL system should then be installed on the wall/side where emergency exits (if any) are present. When installed, the horizontal strips of the **Stverlux**²LLL system should be positioned at a height no greater than 300mm. The vertical strips of the **Stverlux**²LLL system (which are used to indicate the presence of an exit door) should be situated on the same side as the door opening mechanism with the top, additional symbol element of the strip parallel to it.

${\mathscr S}$ Everlux-LLL System for floors and stairwells - Signs and self-adhesive strips

When applying the [®] Everlux²LLL system to floors or stairwells, it is recommended that all surfaces are prepared thoroughly beforehand. The receiving surfaces should be clean and free from all dust, debris and grease. It is advised that an appropriate cleaning agent is used.

Technical characteristics

Signs and strips for walls:

2mm rigid-plastic, with a high intensity photoluminescence achieved by stimulation using a surrounding light of only 25 lux. Strips and signs for pavements and stairs:

Self-adhesive and non-slip polycarbonate 0.3mm thick. High intensity photoluminescence is achieved by stimulation using a surrounding light of only 25 lux.

Printing process:

Serigraphy, high-quality gloss paint UV resistance.

Surface:

Anti-static and easy to clean. The photoluminescent self-adhesive signs and strips \otimes Everlux²LLL products are also classified as anti-slip. Chemical characteristics:

Non-radioactive with no phosphorous or lead.

Performance values:

Minimum luminance properties when tested in accordance with Annex A of BS ISO 16069:

Luminance properties: Considering the stimulation of a 1000Lux - 6500K light for 5 minutes.							
Norms	Luminance Intensity (mcd/m²) (a	Period of Light Decay					
	10 minutes	10 minutes 60 minutes					
BS ISO 16069	140 mcd/m ²	20 mcd/m ²	1800 minutes				
🗷 Everlux-LLL	150 mcd/m ²	21 mcd/m ²	2000 minutes				

The luminance intensity of the non-slip self-adhesive strips on the floor may be lower due to the protective layer of polycarbonate.

Minimum luminance required in installed position in accordance with BS ISO 16069:

Luminance properties: Considering the stimulation of a 25Lux - 4000K light for 15 minutes.								
Norma	Luminance Intensity (mcd/m ²) (after removing the exciting light)							
Norms	10 minutes	60 minutes	90 minutes					
BS ISO 16069*	30 mcd/m ²	7 mcd/m²	5 mcd/m²					
C Everlux [®] -LLL	80 mcd/m ²	10 mcd/m ²	5.5 mcd/m ²					

*Minimum luminance required in installed position.

The luminance intensity of the non-slip self-adhesive trips on the floor may be lower due to the protective layer of polycabonate.

Low Location Lighting system

When a fire occurs, smoke is a very serious consequence which demands careful consideration. The intoxicating nature of smoke and the subsequent panic enlights the paramount importance of a quick and efficient evacuation form an affected area. Smoke rises and this inherent fact can seriously hamper an occupant's ability to evacuate a building using high located escape route signage.

The installation of an **Everlux**-LLL system will allow potentially life-saving equipment and evacuation routes to be readily identified (at a low level below rising smoke) and for them to remain clearly visible at all times. The system is designed to clearly identify fire-fighting equipment and evacuation routes at all times thereby enhancing the escape conditions and helping to significantly reduce the risk of panic and any tragic loss of life.

The [®] Everlux^{*} LLL system is designed to be installed in conjunction with other [®] Everlux^{*} signage systems at the Intermediate and High levels as recommended by BS ISO 16069.

The S Everlux² LLL system meets the stringent requirements of the IMO (International Maritime Organization) and is also in accordance with ISO Norms (International Organization for Standardization).

The **Severlux**²LLL system has been specifically developed to ensure high levels of visibility at all times and in areas that provide unique challenges in terms of positioning and durability. All products are manufactured using a pigment which is effective in areas of diminished surrounding light.

Photoluminescent safety sign system for evacuation routes

According to BS ISO 16069 the Safety Way Guidance System (SWGS) is a complete sign system that is comprised of three signage levels:

- Photoluminescent signage system positioned at the High Location Level (1.8m and above): Ensures visibility and recognition of the evacuation routes at the mid - long range viewing distances
- B Photoluminescent signage system positioned at the Intermediate Location Level (1.2m 1.8m):
- Provides instructions and/or complementary information for occupants
- Photoluminescent signage system positioned at the Low Location Level (to a maximum installation height of 300mm): Ensures visibility and recognition of the evacuation routes and fire-fighting equipment at low/floor level

for occupants

The [®] Everlux[•]LLL system is comprised of the following components:

- PVC photoluminescent strips and signs 2mm thick for installation on walls and vertical surfaces;
- Polycarbonate photoluminescent self-adhesive strips and signs 0.3mm thick for direct installation on floors and stairwells.

Example of a complete Safety Way Guidance System (SWGS)

Since the door does not lead to an exit, it should be signed with rigid-plastic strips on the wall and polycarbonate non-slip strips on the floor.

Evacuation and fire-fighting equipment signs installed between photoluminescent strips are used to indicate the evacuation route direction and the location of fire-fighting equipment. When signing stairwells, it is recommended that the PVC wall strips are continued and that all steps are highlighted by using a combination of polycarbonate self-adhesive strips an/or "L`s".

The emergency exit opens on the right hand side and this is indicated by the signs and strips being positioned to the right and parallel to the door opening mechanism.

A sign indicating the direction of the evacuation route is positioned in between two strips which, in the example, have been installed with a vandal-proof aluminium rail.

S Everlux-LLL Strips for wall mounted guidance lines

S Everlux-LLL Polycarbonate self-adhesive system for floor and stairwells

S Everlux[®] Tamper-proof aluminium rails

Tamper-proof	
aluminium rail 800mm	88 591
Tamper-proof	
aluminium rail 2000mm	88 592

Tamper-proof aluminium rail cap

88 593

Tamper-proof aluminium rails should be used in conjunction with Everlux-LLL photoluminescent PVC wall strips in areas where they may be subjected to tampering.

The aluminium finish also provides the rails with a desirable, aesthetically pleasing finish.

Characteristics

Material: Extruded aluminium profile

Each rail (800mm or 2000mm) is supplied with 1 end cap.

The appropriate signs and strips are slid into position within the framework.

Non-slip Photoluminescent Vinyl Rolls for floor application

Aluminium backed LLL strip system for floor application

These photoluminescent LLL strips are backed with a flexible aluminium base. The strips are 0.4mm thick and offer an ASTM rated non-slip solution for staircases and other similar floor surfaces that can be problematic i.e. carpeted areas and textured flooring etc.

(mm) 1000x37 1000x57 1000x83

S Everlux[®]-LLL Footprint silhouettes

Photoluminescent footprint silhouettes are ideal for indicating the direction and outline of evacuation routes. Available in left and right silhouettes to be used alternately, **Sterlux**-LLL Footprint Silhouettes are made from self-adhesive, anti-slip polycarbonate which is only 0.03mm thick.

Non-slip self-adhesive "L" for stairs

The top and bottom step of every flight should be indicated by a continuous strip (code 81 351) running along its full length. Supplied as a sheet of 4 (2 per step) and are used to indicate the step 's edge.

S Everlux⁻LLL Discs

③ Everlux²LLL Discs are made from self-adhesive, anti-slip polycarbonate which is only 0.062mm thick. Non-slip self-adhesive discs for floors (\emptyset 60 - 1 sheet of 18 units; \emptyset 100 - sold by the unit).

Severlux[®] Protection for steps

Aluminium step profile, has been specifically designed to offer protection for step edges and to ensure users can safely navigate the hazard in an emergency situation and/or in the event of power failure. The step profiles are supplied with antislip photoluminescent polycarbonate surfaces along the step and riser elements with the aluminium profile edges consisting of fine blades along their full length which enhance the step profile's anti-slip properties even in the event of oil or lubricant spillage.

The photoluminescent polycarbonate surface on the step element of the strip ensures easy identification of the step edge in the event of a descending evacuation whilst the photoluminescent polycarbonate surface on the riser surface ensures the same in an ascending evacuation.

Characteristics:

Base material: Aluminium

Photoluminescent element: [®] Everlux^eLLL 0.3mm polycarbonate Dimensions: See accompanying technical drawing

The LLL aluminium step protection strips are supplied ready cut to your specific requirements up to a maximum length of 2.5m and are supplied with a high-tack adhesive which allows easy installation on dust and grease free floor surfaces.

Locate the strip against the front nose of the step as shown (figure 1). Once located, rotate this strip backwards and apply firm pressure along both faces to ensure adhesion (figure 2).

Protection for Steps

88 571

88 572

S Everlux⁻LLL Aluminium floor strips

Aluminium floor profile has been specifically designed to be laid on uneven floor surfaces so that escape route boundaries can be clearly identified in an emergency situation and/or in the event of power failure. The low profile strips are supplied with an anti-slip photoluminescent polycarbonate top surface with the aluminium profile edges consisting of fine blades along their full length. The blades enhance the floor strip's anti-slip properties even in the event of oil or lubricant spillage.

Characteristics:

Base Material: Aluminium

The LLL aluminium floor strips are supplied ready cut to your specific requirements up to a maximum length of 2.5m and are supplied with a high-tack adhesive which allows for easy installation on dust and grease free floor surfaces.

Aluminium floor strips

Large Polycarbonate self-adhesive signs for floors

Terriux-LLL Large self-adhesive signs for floors are made from self-adhesive, anti-slip polycarbonate which is only 0.03mm thick.

Vertical escape routes

Signalling of escape routes and exits in multiple storey buildings

The problems associated with the safety of multi-storey/high-rise buildings have attracted the special attention of the authorities responsible for security in most countries. Not only in the context of construction and fire protection measures, but especially with regard to the safety and evacuation of people. Recent incidents including the World Trade Center in the USA, Windsor Tower in Spain and Tower East in Central Park, Venezuela, among others, have demonstrated the high risks and the specific demands that such buildings present.

Factors that need to be considered in multi-storey/high-rise buildings include high occupation density, increased evacuation times, dense smoke or dust levels, increased and heightened panic levels and limited opportunities for external intervention all of which raise serious problems for evacuation and safety. As such, special consideration should be given when planning escape routes in multi-storey/high-rise buildings and this is particularly relevant when considering staircases and stairwells. These areas are the key escape routes from a multi-storey/ high-rise building and are the areas that the occupants of a building will congregate in.

Following incidents at the World Trade Centre & the UN Headquarters where the efficiency and effectiveness of photoluminescent signage and safety systems with regard to the evacuation of occupants was demonstrated; the New York State Department of Buildings published mandatory legislation ensuring all public use buildings higher than 75ft (22.5m) have LLL signage and safety systems installed.

These LLL systems have been specifically designed to provide consistent information along the escape route and to ensure occupants act in a correct and safe manner thereby reducing confusion, panic and loss of life in an emergency evacuation.

Severlux[®] and Severlux[®]LLL have developed safety signs and strip elements that collectively comprise all the components of a full LLL system including:

- Stair & staircase signage
- Floor level signage
- Identification of the remaining floors until Final Exit(s)
- Escape route signage
- Delineation and marking of escape routes using wall and floor signage or strips
- Fire-fighting equipment signage
- Stair marking strips
- Handrail marking strips

Everlux[®]-AL

Requirements for tunnels in the trans-european road network

"As recent accidents, notably the fire in the Gotthard tunnel in June 2001, show that self-rescuing offers the highest potential for saving lives in the case of an accident in a tunnel, the introduction of clear and self explanatory signs in sufficient numbers indicating the safety equipment in each tunnel is an important measure that can be implemented at relatively low cost.'

To prevent accidents in tunnels and their repercussions, the European Parliament and Council have approved the European Directive 2004/54/EC of 29th of April which defines the minimum safety requirements for tunnels in the Trans-European Road Network.

Aluminium accessories for Type 2 and for Panoramic signs

mounted on an aluminium frame at a 90 degree angle

86 501

Mounting of double-sided signs (Type 2 and Panoramic) within a tunnel environment

Given the characteristic curvature of tunnels, the installation of a sign directly on the tunnel wall without adjustment will cause the sign to be positioned at an offset plane. I Everlux fixing accessories for tunnels are supplied with pre-drilled holes to ensure the signs can be positioned at the correct angle.

Technical characteristics

Terrestate Strengther and Strengther Strengt vandalism and environmental conditions such as humidity and moisture.

Material: Durable 2mm thick aluminium, photoluminescent; Printing: Serigraphy, high-quality gloss paint with UV resistance; Fire Resistance: Non-flammable;

Chemical Characteristics: Non-radioactive, non-phosphorous, lead-free and non-toxic;

Guarantee: In normal conditions of mounting and adequate cleaning, we offer a 5-year guarantee.

Minimum luminance properties when tested in accordance with Annex A of BS ISO 16069:

Luminance properties: Considering the stimulation of a 1000Lux - 6500K light for 5 minutes.								
	Luminance Intensity (mcd/m²) (a	Period of Light Decay						
Norms	10 minutes	Luminance Intensity greater than a 0.3 mcd/m ²						
BS ISO 16 069	140 mcd/m ²	20 mcd/m ²	1800 minutes					
🗷 Everlux°-AL	150 mcd/m ²	21 mcd/m ²	2000 minutes					

The luminance intensity of the non-slip self-adhesive strips on the floor may be lower due to the protective layer of polycarbonate. Minimum luminance required in installed position in accordance with BS ISO 16069:

Luminance properties: Considering the stimulation of a 25Lux - 4000K light for 15 minutes.								
Norms	Luminance Intensity (mcd/m²) (after removing the exciting light) Period of Light Decay							
	10 minutes	10 minutes 60 minutes						
BS ISO 16 069	30 mcd/m ²	7 mcd/m²	5 mcd/m²					
C Everlux-AL	80 mcd/m ² 10 mcd/m ² 5.5 mcd/m ²							

Aluminium Photoluminescent Safety Signs for Tunnels (In accordance with European Council Directive 2004/54/EC)

In enclosed environments like road and rail tunnels, accidents often result in tragic consequences, particularly if the incident is fire related. This risk may be increased significantly if there is a lack of consistent, continuous safety information giving details of escape routes, fire safety equipment, emergency phones, safe areas etc. In the event of an incident or accident, the first ten to fifteen minutes are crucial when it comes to people's safety and damage limitation.

③ Everlux^{*}-AL photoluminescent safety signs for tunnels provide an effective means of reducing risks by communicating clear, unambiguous instructions and by providing guidance.

Terrer and the second states of the second states and the second states are states and the second states and the second states are s

Evacuation safety signs

Within a tunnel environment, signs that indicate the distance to the two nearest exits in both directions (left and right) are required. These signs should be installed at 25m intervals and at a height between 1.1m - 1.5m above the evacuation route floor. For example:

25m to the emergency exit on the left, 475m to the emergency exit on the right

50m to the emergency exit on the left, 450m to the emergency exit on the right Alternatively, these signs can be positioned one above the other with the shortest distance indicated by the top sign.

C Safety recesses

The safety recesses should be equipped with an emergency telephone and at least one appropriate fire extinguisher. There should also be a multi-lingual sign indicating that the recesses do not offer protection in the event of a fire.

Signs for Fire-Fighting equipment

D Emergency Lay-bys Lay-bys should be positioned no further than 1000m apart and should be equipped with an emergency telephone and two appropriate fire extinguishers.

B Emergency exit doors should be numbered

• Fire fighting equipment safety signs Fire-fighting equipment must be installed at 150m intervals.

G

Large scale signs (see page 103) are particularly effective in tunnel environments

Emergency exits

The maximum distance between two emergency exit doors should be 500m. These exits can lead to another road or to a refuge point.

Fire Extinguishers and Fire Hose Reels must be installed every 150 Meters.

E

Large signs for emergency exits in tunnels

The installation of large signs in close proximity to an emergency exist will allow the exit to be identified more readily and will therefore minimise the risk of panic.

The positioning of these signs will ensure the evacuees can easily identify the location of emergency exists throughout the tunnel, thereby significantly increasing the chance of rescue and/or survival in an emergency situation.

Large signs can also be used in conjunction with arrows of increasing size to emphasise the direction of the emergency escape route and exists. Dependent on the size of the large sign installed, it is recommended that the accompanying arrows should be proportionately sized. For example, a symbol with the head diameter of 300mm should have an accompanying arrow 83mm wide.

Everlux[®]-RL

Reflecto-luminescent signs

Retro-reflective properties

The retro-reflective backing used in ③ Everlux*RL products meets the coefficient values of retro-reflective products as specified in the European Norm EN 12899-1:2007 for vertical signs.

Bearing in mind an observation angle of 20' (0.33°) and an entrance angle of +5°, the values for the coefficient of retro-reflective are as follows:

Retro-reflective backing in white	Coefficient of retro-reflective $lu.m^2 \left(\frac{cd}{lux.m^2} \right)$			
EN 12899-1: 2001	50			
𝔅 Everlux°-RL	60			

Photoluminescent properties

The ③ **Everlux**[®]-RL products demonstrate the following photoluminescent properties:

	Luminance	Period of light decay		
Norms	10 minutes	60 minutes	Luminance intensity greater than a 0.3 mcd/m²	
⊗ Everlux [®] -rL	57 mcd/m ^{2 (1)}	7 mcd/m ^{2 [1]}	845 minutes ⁽¹⁾	
	28 mcd/m ^{2 (2)}	3,6 mcd/m ²⁽²⁾	460 minutes ⁽²⁾	
	20 mcd/m ^{2 [3]}	2,9 mcd/m ^{2 [3]}	380 minutes ⁽³⁾	

Values obtained in tests by stimulation with a Xenon bulb, with 1000 lux for 5 minutes, according to DIN 67510-1:2009.
 Values obtained in tests by stimulation with a OSRAM L18W/765 daylight effect bulb (6500 K) – with 25 lux foR 15 minutes.
 Values obtained in tests by stimulation with a OSRAM L18W/840 white light bulb (4000 K) – with 25 lux for 15 minutes.

Aluminium accessories for Type 2 and for Panoramic signs

Type P - Panoramic signs are comprised of two signs mounted on an aluminium frame at a 90 degree angle

150mm 300mm 400mm 600mm

Reflecto-luminescent signs 🐇

Reflecto-luminescent signs

There are many situations where there is movement of both people and vehicles at the same time and at the same place – in car parks, warehouses, mines, etc. Therefore, there is a need for the information conveyed by the safety signs to be understood by all the parties involved and in all circumstances i.e.:

- Pedestrians;
- Drivers of vehicles;
- Circumstances where vehicles are moving, with lights on, and pedestrians are present.

Terror reflection and photoluminescence which allows the sign to perform a dual function:

- When the sign is met with external direct light in the form of vehicle headlights or torchlight it reacts in a retro-reflective manner much as traffic signs do. The light is reflected back in the same direction as its source which allows total visibility of the sign and its inherent message;

- In the absence of light, the photoluminescent properties of the sign emit light in the form of stored energy which is absorbed from surrounding light and direct light from vehicle headlights. This process allows the sign to communicate its inherent, message for a period in excess of 340 minutes.

Text signs are manufactured using a LLL (Low Locaton Lighting) pigment which has been specifically developed for areas of diminished surrounding light to a minimum level of 25 lux.

Terms are also extremely effective in situations where Fire and Rescue Services need to locate fire-fighting equipment such as risers or hydrants. The retro-reflective properties of the signs allow quick identification of the equipment either from vehicle headlights or by torchlight.

Emergency Escape Route signs for Tunnels

In Accordance with BS 5499-4, EN BS ISO 7010 and the European Council Directive 92/58/EEC

Within a tunnel environment, signs that indicate the distance to the two nearest exits in both directions (left and right) are required. These signs should be installed at 25m intervals and at a height between 1.1m - 1.5m above the evacuation route floor.

S Everlux[®] Fire extinguisher frame kits

The use of an [®] **Everlux**[°] Fire extinguisher frame kit ensures the fire extinguisher's location is clearly visible at all times. The kit is positioned around the full perimeter of the fire extinguisher and allows a user to easily identify the fire extinguisher's whereabouts particularly in the event of an emergency and/or loss of electrical power.

88 531

Severlux[®] Fire extinguisher frame kit (for 2 units)

\otimes Everlux° Fire extinguisher frame kit (not including 5kg CO₂)

The kit has been developed for all portable fire extinguishers with the exception of the 5 kg CO_2 types. The kit is positioned around the full perimeter of the fire extinguisher. Each fire extinguisher is identified with 4 PVC strips:

- 2 x 300x35mm ® Everlux[°] PVC strips for horizontal installation;
- 2 x 800x35mm ® Everlux[°] PVC strips for vertical installation.

One kit contains enough strips to identify 2 fire extinguishers:

- 4 x 300x35mm [®] Everlux[®] PVC strips for horizontal installation;
- 4 x 800x35mm **Everlux** PVC strips for vertical installation.

S Everlux[®] Aluminium frame

An [®] Everlux[°] Aluminium frame can be the perfect sign accessory to give a standard photoluminescent PVC sign a desirable, aesthetically pleasing finish. It has a discreet and elegant design and is manufactured using high quality materials. It allows for connection between the sign and the wall and its visual impact does not conflict with the sign resulting in perfect harmony between the three elements (wall – frame – sign).

Severlux[®] Slim-line aluminium frames

Terms are supplied pre-fitted to the sign and are ready to install.

③ Everlux[°] Slim-line aluminium frames can be fixed to the wall using self-adhesive pads or tape, ③ Everlux[°] Adhesive or other proven methods. It is advised that the receiving surface is clean, dust and grease free.

Self-assembly aluminium frame kit

Self-assembly aluminium frame 88 583

The self-adhesive pads which are supplied with the frame kit are generally suitable for most surface types that are clean, dust and grease free. However, should secure adherence not be attained with the pads supplied, it is recommended that installers consider using [®] Everlux[°] Adhesive or other proven fixing methods.

Teverlux° Self-assemble aluminium frames can be fixed to the wall using the self-adhesive pads which are supplied with the frame kit or by using [®] Everlux° Adhesive which is supplied separately.

Characteristics

Material: Extruded aluminium profile The frame kit is comprised of the following: - 4 x Extruded aluminium profiles - 4 x PVC "L" connectors

- 4 x self-adhesive pads

Applicable only to square and rectangular signs.

Kits and accessories +

S Everlux[®] FLEXI Aluminium Frame Kits

The sign is inserted into a groove located in the upper section of the frame.

The ③ Everlux° FLEXI frames are supplied assembled with all required mounting accessories and are available as follows:

Type 1 – Wall Mounted Sign

The Type 1 Everlux FLEXI frame kit is comprised of the following: - 1 x Aluminium FLEXI Frame - 2 x Type 1 fittings

Type 2 – Perpendicular Wall Mounted Sign

The Type 2 Everlux FLEXI frame kit is comprised of the following: - 1 x Aluminium FLEXI Frame - 1 x Type 2 fitting

Type 3 – Suspended Single or Double Sided Sign

The Type 3 Everlux FLEXI frame kit is comprised with: -1 x Aluminium FLEXI Frame Additionally indicate the fixing and suspension kit from pages 122 and 123 for type 3 fitting.

S Everlux[®] Magnetic signs

Magnetic sign

88 600

88 601

Severlux can supply (on request) all type 1 signs fitted with magnetic finish which allows secure adhesion to all suitable metallic surfaces for all sign sizes.

The new finish is comprised of a rubber and ferrite compound which is applied to the rear surface of the signs.

Severlux Magnetic signs offer an alternative solution when installing signs in a variety of applications including plans rooms, storage facilities and industrial areas. They are also ideal for mounting on metal stands or frames for use as temporary signage can be used either indoors or outdoors.

In order to achieve a satisfactory magnetic adherence, it is desirable that as much of the magnetic surface is in contact with the receiving, metallic surface as possible. However, if the receiving surface has a curved profile (pipework, cylinders etc) it is recommended that a suitability test is conducted beforehand.

Technical data:

Coercivity: HcB(KA/m) = 95; HcJ(KA/m)= 99, Remanence BR(T) 0,16 Maximum exposed temperature - 80 C

How to order:

When ordering your Type 1 sign, please specify that you require a magnetic finish.

S Everlux[®] Flexible Type 2 bracket

Flexible Type 2 bracket

The 🗷 Everlux[®] Flexible Type 2 bracket consists of a plastic, flexible strip which was developed to allow the sign to move sideways within a 180° radius without breaking and then return to the correct starting position after impact or collision.

The ③ **Everlux**° Flexible Type 2 bracket has been specifically developed for installations in areas where the likelihood of a collision or impact is increased. It is ideal for areas where forklift trucks operate and cargo is distributed such as warehouses, factories, supermarkets and goods yards. The Severlux[®] Flexible Type 2 bracket 's durable design ensures the sign is resistant to collision, impact and vandalism.

The 🟵 Everlux° Flexible Type 2 bracket can also be fixed to the ceiling.

Kits and accessories +

S Everlux[®] Adhesive

S Everlux[®] Adhesive

ADHE

The [®] Everlux[°] Adhesive provides the ideal solution when adhering signs to a variety of surfaces including those that are uneven, rough or irregular.

Characteristics:

- Quick initial drying time minimises slippage;
- High humidity and temperature resistance to 75 °C
- High adhesion minimises risk of improper removal;
- Drip-free after gun pressure is released;
- Easy application;
- Suitable for all sign sizes.

Instructions for use:

The most efficient and effective method for fixing [®] Everlux[°] signs is to apply [®] Everlux[°] Adhesive in each corner and in the centre. Place the sign in the correct position and apply even, firm pressure across the surface of the sign holding it in place for a few seconds to ensure good adhesion.

If the ^(®) **Everlux**[°] sign is to be positioned in an area where it may be subject to tampering or improper removal, an alternative method can be used. Apply a thin bead of ^(®) **Everlux**[°] Adhesive around the entire perimeter of the sign and apply even, firm pressure across the surface of the sign holding it in place for a few seconds to ensure good adhesion. It is recommended that the bead is applied 1cm in from the sign edge to prevent unsightly and messy overspill.

Available in packs of 36 tubes.

Each tube of ③ Everlux° Adhesive is supplied with a cap for the nozzle to prevent it drying out after use.

When applied correctly, ③ **Everlux**° Adhesive has been proven to be more cost effective than other adhesive brands.

Packaging and Performance Tube of 300ml.

Considering a 5 mm diameter of adhesive bead, approximately 15 linear meters, the following yield is obtained.

Size (mm)	Quantity	Size (mm)	Quantity
150x150	29	200x300	17
150x200	25	400x200	14
200x200	21	400x300	12
300x150	19	600x400	8

Excellence by Everlux

The Excellence safety sign system represents the seamless fusion of safety signs into luxurious and designed environments. It emphasizes the aesthetic and decorative style. Excellence uses only high and innovative materials for all sign bases. The Excellence signage system provides an aesthetic finish in which all the background colours are emitted, irrespective of the circumstances (presence/absence of light). Excellence is a patented product. Main features: Innovative design;

Signs allow both the pictograms and the colours to be visible in the dark; Signs available in Acrylic Glass – Transparent (Crystal), Opaque (Frosted), Black, White and Mirror Bronze - and Metallic base materials - Brushed stainless steel and Brass;

Signs are supplied with fixing accessories.

Project - Safety Project Support Tool

Safety project support tool developed specially for designers and other technicians with the responsibility for prescribing signage, which assists in the drafting of safety signs projects. Available in two separate versions so as to carry signage projects, not only in AutoCAD but also in

drawings in image format (jpeg, bmp, png) or dxf.

www.everluxmaritime.com

Photoluminescent Maritime Safety Signs

With its photoluminescent maritime safety signs catalogue, Ertecna offers a specific tool for the maritime industry which is according to IMO Resolutions, SOLAS Convention and ISO standards. This tool will allow ship suppliers, shipbuilders, owners and operators, and their safety officers and purchasing managers to swiftly understand the technicalities of safety signage systems design and installation, to comply with the most updated standards on safety signs and consequently to provide a highly safe environment for their crews and passengers.

> Product certification: Lloyd's Register Type Approval MED Certification Service Suppliers Approval

How to compare the photoluminescent properties of safety signs

1. Ideally, the test will be conducted in a room that is lit by fluorescent lighting and that is completely dark after the light source has been removed (storerooms or cupboards are ideal).

2. Lay out a selection of photoluminescent safety signs with the printed surface facing upwards towards the light source. Ideally, the safety signs will be within 25cm (8") of the light source and will need to be exposed to the light for 5 minutes.

3. After the 5 minutes exposure time is complete, turn the signs face down and switch off the light. Leave the signs face down for 2 minutes and then turn them back over so that they are face up and leave the light switched off.

4. In the darkened room you will be able to see the photoluminescent effectiveness of the safety signs. By observing the safety signs over a 15 minute period you will be also be able to observe the respective reduction in intensity/brightness between the photoluminescent safety signs. More often than not, Everlux photoluminescent safety signs and products shine brighter, and for longer, than other comparable products.

In accordance with legislation, standards and consumer protection to ensure quality and conformity, our trademarks are printed on all **Everlux**^{*}, **Everlux**^{*}LLL, **Everlux**^{*}AL and **Everlux**^{*}RL signs.
